REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art fails to show or teach a method or apparatus for producing hydrogen or carbon monoxide by cryogenic distillation with a recycle gas line from the separation unit to downstream of the separation unit, with the operation of the production unit which produces the stream separated by the cryogenic distillation modified based on the flow rate and composition of the recycle gas. The various parts of the system can be found. Patent 4,891,950 to Seufert shows a system for producing synthesis gas (comprising carbon monoxide and hydrogen) with sensor 70 sensing the composition of the outlet gas from the production means and sensor 63 sensing the pressure of separated carbon monoxide. The outputs from the sensors are used to control the feed streams to the production means. Allam et al (2006/0074132) shows a system for separating hydrogen and carbon monoxide which uses a recycle stream (see paragraphs 76 and 89). No reference can be found which teaches using the rate and composition of a recycle stream to control a production means, however. Even if one were to add a recycle stream to Seufert to improve separation efficiency, there is no motivation to use the composition and flow rate of the recycle stream to control the production means.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
